Product-led strategy

across *finance, architecture & execution.*

01PRODUCT / CPO Customer-problem-solution fit & always-on Product-Market-Fit. - Start with the customer's problem, not the solution. - Validate before scaling; build-measure-learn fast. - Treat product-market fit as always-on, not a milestone.	02FINANCE / CFO Financial fluency & commercial alignment. - P&L, balance sheet and cashflow translated into product and pricing decisions. - Align contracts, billing, retention and go-to-market to what the business can bear. - A CFO who sits in the value stream, not the back office.
03STRATEGY & OPERATING RHYTHM / COO Strategy & operating rhythm. - Org design for the 10-200+ start-up and growth-stage moments. - Connected goals & metrics across sales, product, delivery and finance. - Pragmatic, empathy-led transformation working and advisory groups - not directive based cost-cutting.	04ARCHITECTURE / CTO Business-led solution & architecture. - Ask whether the problem matters to the customer first. - Then choose the best architecture and path to solve and validate it. - Technical enough to work credibly with engineering and data leaders.

Executive capabilities, *where strategy becomes execution.*

Venture & product strategy - Customer-problem-solution validation before scaling - Product-market fit as an always-on discipline, not a milestone - Product vision, roadmap & commercialisation - Founder & growth-stage product leadership	Commercial & P&L stewardship - Financial fluency that shapes product, pricing and go-to-market decisions - Interim/Hybrid CFO & financial resource optimisation - Cashflow & operating-model rebuild - ASX-listed and private company executive leadership - Buy-side and sell-side due diligence
Operating-model & org design - Org design for the 10-200+ start-up and growth-stage moments - Connected goals & metrics across sales, product, delivery and finance - Transformation and advisory working groups, not lone turnarounds, foster buy-in and ownership to change	Architecture & AI-native delivery - Solution architecture & future-state modelling - AI Harnesses and agent orchestration - Build-measure-learn at delivery scale - Cloud, DevOps & technical-debt governance
